Version 1.1.9198 (April 2020)

Learn what's new in the latest release of DGLux5.

Update to the latest version of DGLux5 to experience these changes.

Changelog

- Fixed issues with the Zip Download block.
- Resolved the Chrome image alignment issue. There is a new option on the image component, called "extend1px", when that option is true, the image component size is 1px smaller without affecting the image's original size.
- Added a feature to edit shared properties for UI symbols.
- Added ReactJS widgets support in DGLux.
- Fixed bug in the Position and Size editor.
- Fixed the DataGrid rendering issue when the "scrollToIndex" property set manually.
- Improved widget snapping: snapping between custom snapping points, added green snapping lines, added option to disable custom snapping points.
- Added drag and drop symbol replacing when dropped on top of each other.
- Fixed DG Time Input component: AM/PM dropdown list didn't work in Firefox.
- Fixed vertical scroll bar in 'User Management' dialog.
- Fixed 'Insert parameter after' for some Dataflow blocks.
- Fixed Dataflow blocks with multiple inputs don't update their output when one removes input pin.
- Improved "Auto size" button in PI to produce history.
- Modified Export PDF block to also save a PDF file to the project folder.
- Fixed the ESRI Map Group Component issue with Display property.
- Added an ability to reorder series in a node list.
- Fixed an image tiling bug with GIF files.
- PA2 core optimizations.
- Fixed PA / Niagara Schedules page to not move when trying to move an event.
- Fixed localization files were not loading from the right path.
- Fixed RTE when edit symbol property in Chrome 80 (JS only).
